Vlaardingen, 12nd March 2004

Concerning: StaBFast Stabilisation System

Dear Madam / Sir,

This is to certify that maximum permissible working loads for the parts of StaBFast Stabilisation System are as follows:

Strut	1.500 kg
Wedge	750 kg
Strap	6.000 kg
Hook	5.000 kg
Ratchet	5.000 kg

The various parts of the struts have been tested with the following rectilinear forces:

Feet	2.000 kg	deformation, no collapse
Strut only	5.000 kg	no deformation.
Head	3.000 kg	deformation, no collapse

We however point out that StaBFast is a stabilisation system not a lifting-device. This means that the system is suitable for stabilising loads, not for moving them.

StaBFast has been designed and constructed by Algebra in association with Weber-Hydraulik. The StaBFast Stabilisation System is manufactured by Nooij B.V.

I trust to have informed you sufficiently.

Best regards,

ALGEBRA
